

What is claimed is:

1. A flexible floral sleeve for containing a pot, comprising:
a flattened body having a first panel, a second panel, an upper end, a lower end having a bottom edge, a left side edge absent a gusset, a right side edge absent a gusset, and an inner retaining space, the flattened body further comprising a lower portion and an upper portion which is detachable from the lower portion via a detaching element between the upper portion and lower portion, and wherein the left side edge and the right side edge are angled inwardly near the lower end to form a half hexagonal shape in the lower end of the flattened body, and wherein the bottom edge of the lower end comprises a straight seal between the left side edge and the right side edge, the flattened body absent a gusset in the lower end, and wherein the lower portion of the floral sleeve is completely tapered between the half hexagonal shape in the lower end and the detaching element.
2. The floral sleeve of claim 1 wherein the upper portion has apertures therein for supporting the floral sleeve upon a wicket.

3. The floral sleeve of claim 1 wherein the upper portion is sized to surround and enclose a floral grouping disposed within pot contained within the floral sleeve.
4. The floral sleeve of claim 1 wherein the lower portion has a skirt portion therein.
5. The floral sleeve of claim 4 wherein when the upper portion is detached from the lower portion, the skirt portion is left with an upper edge having a non-linear pattern.
6. The floral sleeve of claim 5 wherein the non-linear pattern of the upper edge of the skirt portion has a pattern which is scalloped, inverted scalloped, wavy, curved, side-wave, zig-zag, toothed, rectangular or angular.
7. The floral sleeve of claim 1 wherein the detaching element is a line of perforations.

8. A flexible floral sleeve for containing a pot, comprising:
a flattened body having a first panel, a second panel, an upper end, a lower end having a bottom edge, a left side edge absent a gusset, a right side edge absent a gusset, and an inner retaining space, the flattened body further comprising a lower portion and an upper portion which is detachable from the lower portion via a detaching element between the upper portion and lower portion, and the lower portion comprising a skirt portion which is left with an upper edge when the upper portion is detached from the lower portion, the upper edge having an angular pattern, and wherein the left side edge and the right side edge are angled inwardly near the lower end to form a half hexagonal shape in the lower end of the flattened body, and wherein the bottom edge of the lower end comprises a straight seal between the left side edge and the right side edge, the flattened body absent a gusset in the lower end, and wherein the lower portion of the floral sleeve is completely tapered between the half hexagonal shape in the lower end and the detaching element.
9. The floral sleeve of claim 8 wherein the upper portion has apertures therein for supporting the floral sleeve upon a wicket.

10. The floral sleeve of claim 8 wherein the upper portion is sized to surround and enclose a floral grouping disposed within pot contained within the floral sleeve.

11. The floral sleeve of claim 8 wherein the detaching element is a line of perforations.

12. A flexible floral sleeve for containing a pot, comprising:
a flattened body having a first panel, a second panel, an upper end, a lower end having a bottom edge, a left side edge absent a gusset, a right side edge absent a gusset, and an inner retaining space, the flattened body further comprising a lower portion and an upper portion which is detachable from the lower portion via a detaching element between the upper portion and lower portion, and the lower portion comprising a skirt portion which is left with an upper edge when the upper portion is detached from the lower portion, the upper edge having a non-linear pattern, and wherein the left side edge and the right side edge are angled inwardly near the lower end to form a half hexagonal shape in the lower end of the flattened body, and wherein the bottom edge of the lower end comprises a straight seal between the left side edge and the right side edge, the flattened body absent a gusset in the lower end, and wherein the lower portion of the floral sleeve is completely tapered between the half hexagonal shape in the lower end and the detaching element.
13. The floral sleeve of claim 12 wherein the upper portion has apertures therein for supporting the floral sleeve upon a wicket.

14. The floral sleeve of claim 12 wherein the upper portion is sized to surround and enclose a floral grouping disposed within pot contained within the floral sleeve.

15. The floral sleeve of claim 12 wherein the detaching element is a line of perforations.
